PURE™ Sustainability

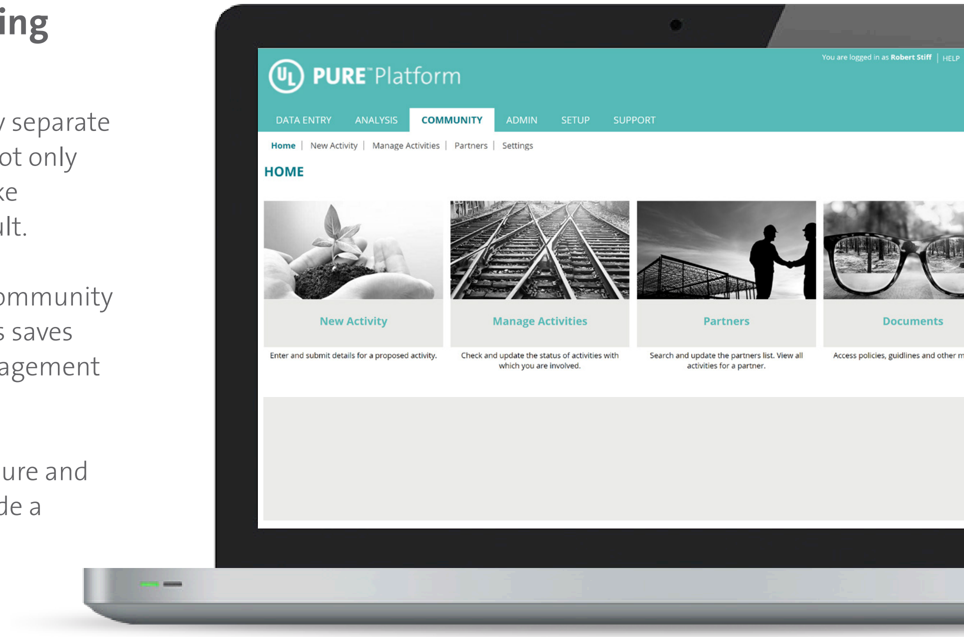
COMMUNITY MODULE

Track and Report on Your Volunteering and Donations Activity

Community involvement data is often collected by separate people, in separate Excel sheets or systems. This not only makes consistent data-entry difficult, but can make centralized reporting or cross-checking very difficult.

The Community module lets you collect all your community information in an easy-to-use, central system. This saves time, improves accuracy, and makes detailed management reporting simple at any time of year.

The system is configurable to your business structure and processes, but to get you started quickly, we provide a default structure based around the London Benchmarking Group (LBG) model, letting you track cash, time, in-kind or leverage figures.



KEY BENEFITS & FEATURES

- **Controls Data Entry –** Provides high quality data entry with no duplication of recipients. Input data in different currencies and manage conversions.
- **Highly Configurable –** Data-entry fields and terminology can be adjusted to meet your organization's requirements.
- **Provides Process –** Allows you to track the status of each donation from initial request through to payment. Personalized emails can be automatically produced at different stages.
- **Easily Produce Reports –** (Both tables and charts) on the proposed, agreed and declined community investments, clearly showing what has been given, and to whom.
- **Manage Beneficiaries –** Ability to manage partners/beneficiaries and analyze all activities for a given partner.
