

PURE™ Safety

INCIDENTS MODULE

Recording near misses, hazards and observations gives you greater visibility and enhances your ability to prevent reportable incidents. There is cross-over between incident management and risk management, as organizations work to limit the likelihood of incidents reoccurring or reduce their impact.

The PURE™ Safety Incidents module allows any user to capture incidents in detail. You can record everything from who or what was involved, how the incident was investigated, root cause analysis, risk assessment and mitigation. You can also define corrective or preventative actions.

Performance dashboards show the progress of an incident, and you can generate metrics for incidents, risk and actions, using the reporting tools to illustrate performance and trends. Reporting to national health and safety bodies such as OSHA, RIDDOR, ISO, EPA is straightforward using pre-defined report formats.

KEY BENEFITS & FEATURES

- **Capture incidents with ease** – Employees across the business can log incidents in detail.
- **Manage actions** – Track preventative and corrective actions.
- **Share progress** – Report on trends and performance internally and respond efficiently to national health and safety bodies.
- **Audits** – All information is stored in a single, secure and audit ready location.
