

PureOHS™

INCIDENTS MODULE

You've made a personal commitment to protect and value your employees, sending them home healthy and safe every day. Thankfully, there is a solution that helps you keep that commitment while making your job easier.

The PureOHS Incidents module is a complete safety management tool with all of the functionality and configurability your team needs. Allow managers, supervisors, and other employees to easily submit incidents, near misses, or other conditions that could lead to an incident or injury. Review data to assign follow-up tasks and take action to mitigate future risk.

Not every safety program is the same. The PureOHS Incidents module is built with highly configurable forms, reports, graphs, and real-time dashboards, so your users get the information they need in the format best suited to your organization.

KEY BENEFITS:

- Scalable platform that can grow across multiple sites
- Customizable forms, reports, and dashboards
- Full integration with PURE Health modules and data
- Mobile accessibility

Need to report your data to OSHA or other regulatory bodies? Our easy export functionality allows you to export the forms you need at the click of a button. Stop wasting time manually filling out required forms and digging through paperwork to make sure you are in compliance. All of your data is stored in one place, so you can analyze and report easily.

HOW DOES THE PUREOHS INCIDENTS MODULE HELP YOUR ORGANIZATION?

- **Involve employees in the process of submitting observations and reporting near misses**
- **Follow up on observations immediately by assigning corrective and preventative action to specific users**
- **Identify trends and implement follow-up steps without delay**
- **Easily generate required OSHA reports (300, 300A, 301)**
- **Evaluate their overall safety performance through configurable dashboards and reports**
- **Meet OSHA, ISO, OHSAS and company compliance requirements**
- **Increase health and safety accountability throughout the organization**
- **Integrate health and safety data to improve predictability and decrease incidents**

Best of all, the PureOHS Incidents module is built to integrate with our health modules, including case management and more, so you can integrate health and safety as whole, and make better informed decisions to improve employee health and prevent injuries from occurring.

As a web based system, Incidents is available on any device, including iPads and other tablets. Installation is simply opening the browser on the device and logging into the application. No IT support is necessary and your employees are ready to report!
